```
class MyClass
{
    int var;
public:
    virtual void fun()
    {}
};
```

```
class MyClassA:public MyClass
{
    int varA;
public:
    virtual void fun()
    {}
    virtual void funA()
    {}
};
```

```
class MyClassB:public MyClass
{
```

```

    int varB;
public:
    virtual void fun()
    {}
    virtual void funB()
    {}
};

```

```

class MyClassC:public MyClassA,public MyClassB
{
    int varC;
public:
    virtual void funB()
    {}
    virtual void funC()
    {}
};

```

```

class MyClassA:virtual public MyClass
class MyClassB:virtual public MyClass
class MyClassC:public MyClassA,public MyClassB

```
